Session 6 of 6 · ~2 hours including discussion

What You Now Understand

And what comes next

The Story So Far

“The most important thing to understand is not Bitcoin. It is the economic foundation — what easy money costs, what hard money restores, and why the money we use shapes the world we live in. Bitcoin is the solution that follows from that understanding.”

You started with trade — the most fundamental human behavior. You followed that thread through specialization, civilization, and the emergence of money. You learned what makes money good, traced the long dominance of gold, and understood exactly why gold's one structural flaw was enough to unravel the entire system.

You saw what unlimited money creation does — not just to prices, but to wars, inequality, incentives, and the texture of daily life. You learned how hard money changes time preference, and how the gold standard era produced broad prosperity that we have largely lost.

And you arrived at Bitcoin not through hype, but through logic.

What You Now See Differently

Why housing feels out of reach

Not because housing became more valuable — because money became less valuable. The wealthy use real estate to protect wealth from debasement, bidding up the price of shelter for everyone else.

Why wages never catch up

Wage earners sit at the furthest end of the Cantillon chain. New money reaches assets before it reaches salaries. Workers see rising costs, not rising wages.

Why debt feels inescapable

The fiat system requires debt to function — money is created through loans. Saving is punished; borrowing subsidized. Debt is structurally required, not a personal failure.

Why everything feels disposable

Not greed. Not cheap manufacturing. Incentives set by the monetary system. Inflation erodes purchasing power, consumers buy on price, producers cut costs, quality falls.

Extended Q&A — Common Objections

Technical: Is Bitcoin just speculation?

Volatility $\neq$ lack of utility. The monetary properties hold regardless of price. Fifteen years of continuous operation with no failure.

Technical: What about energy use?

Real tradeoff. Compare to cost of gold mining, banking system, armored transport. Whether sound money is worth the energy is a legitimate question.

Political: Can governments ban it?

Can restrict. Cannot shut down a global distributed network. No central point of failure. Network has never been shut down.

Political: What about CBDCs?

Government digital currency is the opposite of Bitcoin — programmable, controllable, unlimited. Does not solve the scarcity problem. It deepens it.

More Objections — Philosophical

Isn't it too late?

Global adoption is still low single digits. The transition from fiat to sound money is measured in decades. Understanding is more valuable than timing.

What if you're wrong?

An honest answer: you can disagree with the conclusion while accepting the historical record. The wealth gap, debt explosion, and purchasing power erosion since 1971 are documented facts. Form your own view.

What about other cryptos?

Most have no fixed supply and central teams who can change the rules. Bitcoin is categorically different. The distinction matters enormously.

What about my 401k / retirement?

Not financial advice. But understanding the monetary system you are saving within changes how you think about what you're saving in. That is a conversation for you and a trusted advisor.

Essential Reading

The Bitcoin Standard

Saifedean Ammous

The definitive case. Start here.

[Start here](#)

The Fiat Standard

Saifedean Ammous

How fiat actually works — mechanics and consequences.

[Monetary](#)

What Has Government Done to Our Money?

Murray Rothbard

Short, readable classic. Free online.

[Foundation](#)

Price of Tomorrow

Jeff Booth

Deflation, technology, and why fiat fights a losing battle.

[Monetary](#)

Broken Money

Lyn Alden

Comprehensive, data-rich, accessible.

[Monetary](#)

A Little History of Money

Lawrence Leppard

Concise monetary history and the hard money case.

[Foundation](#)

Abundance Architecture — Coming soon

A framework for building personal and community prosperity on a sound money foundation.

Health Unveiled — Coming soon

Exploring the intersection of monetary policy, incentive structures, and public health outcomes.

FINAL DISCUSSION — Session 6

1. What is the single most important thing you are taking away from these six sessions?

2. What do you still push back on? Where are you skeptical — and what would change your mind?

3. What would you tell someone who asks why you spent six evenings talking about money?

4. What does a community look like that has internalized these ideas? Is that something worth working toward here?

5. What is your next step — personally, or for this group?

Thank You

“The monetary system is not a law of nature. It is a human invention — and human inventions can be changed. Understanding is where that change begins.”
